

The Second International Fascia Research Congress will take place at Vrije Universiteit, Amsterdam October 27 – 30, 2009. If you haven't already registered for the main conference, early registration has been extended through June 15, 2009. If you have already registered, you may add a post congress workshop through the online system.

POST CONGRESS WORKSHOPS

We are very pleased to offer an impressive variety of workshop subjects presented by some of the top people in their respective fields. Workshops will focus primarily on clinical methodologies in fields where the human fascia is a main focus of practice and/or theory. An important goal of the Fascia Research Congress has been from the outset to provide an opportunity where both researchers and clinicians can meet, share their work, and collaborate.

For Researchers...

It is expected that new areas of scientific inquiry will be identified. The workshop program is designed to give fascia research scientists a greater understanding of how clinicians relate to the subject of the human fasciae, a first hand view of clinical applications, and exposure to the questions clinicians have about the workings of their specialties.

For Clinicians...

The program is also designed for clinical practitioners. They will have an opportunity for cross education to learn new techniques and points of view. Each workshop will include presentation of a clinical approach and clinical applications of the scientific findings from the main conference.

The intention is that education in the science underlying clinical methods will add new understandings for the benefit of practitioners themselves in their work and ultimately in the delivery of successful outcomes for those they serve.

NEXT STEPS

You are invited to register for both the main conference plus a post-conference workshop, or just post-conference workshops. There are 5 full day workshops and 6 half day, each of the latter is planned to be repeated twice. You can select any one full day presentation or any two half day sessions.

As both a scientist and a clinician, I highly recommend these workshops. Looking forward to another top flight conference...in Amsterdam this fall...hoping you will be there.
