

## Transform the Future of Structural Integration

### AND YOUR PRACTICE!

**May 20, 2010**

IASI is working to create the SI body of knowledge (SI-BOK) - a living document that will serve to more clearly define structural integration. This project will touch all aspects of our profession, provide a process to articulate the collective wisdom of the entire community, and draw appropriate boundaries around **what is**, and **is not** structural integration.

#### **SI-BOK Purpose:**

\*Empower our profession to maintain the integrity and enhance credibility of SI in the eyes of the public, regulatory bodies and other professions;

\*Clearly define and articulate the inherent value of structural integration;

\*Use this process and its results to further support your practice as a structural integrator.

**You are invited to help create an image of SI that most fully represents the professionals practicing this important work. To ensure that our profession continues to develop in ways that are in line with your own goals and expectations, your participation is crucial.**

**Bring your unique talents to this project to support and sustain a thriving profession. This will strengthen everyone's private practice, attract enrollment in our schools, and bring awareness into the world about Structural Integration.**

**You can contribute to the process by giving your time, talents and/or funds!**

### **Join a Team for One of These Focus Areas:**

**Core Curriculum/Glossary** - Faculty members from various SI schools are currently working on curriculum guidelines. A Glossary and Definition of Terms relevant to consistent identity, core curriculum, training standards, certification and scope of practice needs to be developed. Contact Jesse Guerrero at [risingbody@msn.com](mailto:risingbody@msn.com).

**Philosophy and Evolution, Consistent Identity** - How do we articulate the core **Philosophy**, the foundation of this unique body of work? How can we describe, for other professions, regulatory bodies, and the public, the differences in the various **Evolutions** of SI that are developed and taught by different schools? How can we articulate **Consistent Identity** that describes our work to other professions and to the public? How can we define **Best Practices** within our profession~ what do practitioners utilize in their private practice that is different from what is taught in the classroom?

Contact Linda Bienenfeld at [linda.bienenfeld@gmail.com](mailto:linda.bienenfeld@gmail.com).

**Research & Resources** - How does research fit into who we are as a profession and who we want to be in the future? The identification of Resources currently within our community, as well as the development of ideas of how to provide accessibility to practitioners, science and medical professionals, and the public will need examination.

Contact Bethany Ward at [bethany@rolfusa.com](mailto:bethany@rolfusa.com).

**Licensure, Certification, Scope of Practice, Training Standards-** Would professional licensure support the profession? How does certification serve the SI profession, and how can we capitalize on that? How do we articulate our scope of practice, and present that consistently within the profession, to other professions and to the public? How should we define basic training standards? Contact Libby Eason at [libbyeason@aol.com](mailto:libbyeason@aol.com).

## **It's Time to Organize and Integrate our Profession!**

Please contact one of the team leaders or the IASI office at [info@theiasi.org](mailto:info@theiasi.org) for more information or sign up today.

Meetings of each team will be held via conference calls.

Information gathered will be presented to the stakeholders of our profession by representatives from each team at a face to face meeting on September 20th & 21st, 2010 in Denver, Colorado.

Help set the direction for the next phase of the SI-BOK.

**The world needs you not just integrating bodies but integrating the profession!**

Let us know if you are interested in joining a team or lend your support by contributing funds to this worthy cause!

**Spread the word and share this email with every structural integrator you know. Encourage them to be a part of this important project!**
